

When a single point of failure **is not an option**

## Outstanding Layer 4-7 Performance

The Loadbalancer.org appliance - ENTERPRISE is the fastest way to scale your web site. Simply place two of the Ultra-reliable Solid State Loadbalancer.org appliances (in fail-over mode) between your firewall and your web servers.

All web requests are handled by the Loadbalancer and dispatched to individual web servers based on the scheduling algorithm you select. If any web server fails a health check it is immediately taken out of the cluster so that your customers are not affected.

### ENTERPRISE

#### Clustered pair **£4995**

- Small, light and powerful
- Gigabit Layer 4-7 load balancer
- Ideal for large critical environments
- Cluster ready, all the configuration on the master is auto-replicated to the slave.

### ENTERPRISE

#### Virtual Appliance (clustered pair)

Flexible and OS independent  
VMware certified virtual appliance.

**£3,495**

### SLEDGEHAMMER

#### High-availability pair

- More flexibility with 4 \* GIG NICs.
- More sessions with 1GB RAM

**£7,995**

	<b>ENTERPRISE</b>	<b>SLEDGEHAMMER</b>

<b>802.1 &amp; 802.3ad Support</b>	Yes	Yes
<b>High-Availability</b>	Yes	Yes
<b>Solid State</b>	Yes	Yes

*"We saved £140,000 by not going with an F5 solution, and we never looked back"*

*"The thing that impressed me was that support questions are actually answered by someone who knows what they are talking about."*

*"We tried Microsoft NLB and compared it to a Loadbalancer.org ENTERPRISE appliance. We were shocked to find the Loadbalancer decimated the other solution on performance & features."*

*"Our old Foundry kit was maxing out at about 900 Mb/s on persistent connections...the ENTERPRISE pair we now have doesn't even break a sweat."*
